KASPERSKY ANTI-VIRUS

THE SOFTWARE THAT SAVED MILLIONS OF COMPUTERS
WORLDWIDE

Kaspersky is the name that topped the lists of the most efficient and popular anti-virus applications for years. Millions of users worldwide have chosen Kaspersky products because of their impeccable quality, outstanding reliability and the level of efficiency yet to be reached by a great many of competitors. Kaspersky Anti-Virus is a versatile anti-virus solution that protects your computer from all kinds of online and offline threats – regular viruses, Trojans, worms, spyware, adware – and efficiently cures infected files.

The software scans every email message coming into your inbox and blocks infected ones, so you don't have to worry about suspicious attachments any more. Your Internet traffic is also being constantly monitored to prevent any kinds of attacks or intrusion attempts. Which is more, Kaspersky Anti-Virus analyzes and closes Internet Explorer vulnerabilities, detects and disables links to malware and phishing sites, disables keyloggers and even protects your IM applications, such as Yahoo, ICQ or MSN Messenger! Based on the concept of preventive protection, Kaspersky Anti-Virus constantly scans your OS and applications for vulnerabilities and performs global monitoring of all the processes to detect existing or new threats (using code packers as one of the indicators of suspicious code). If you are installing the software on an already infected computer, don't worry – Kaspersky Anti-Virus protects itself very well and will not allow any external applications to block or disable it.

The installation process is extremely simple – Kaspersky Antivirus automatically configures the necessary services and starts working right away. The user interface mostly uses intuitive wizards for operations that require user's involvement, which makes using the program extremely easy. If you can't find the right answer in the program or its manual, don't panic - registered users receive 24/7 technical support. Needless to say that updates are released virtually every day, so you can rest assured that the enemy will not pass, no matter how new and stealthy it is!

Choose Kaspersky Anti-Virus for ultimate protection from existing and new threats. This is an all-inclusive suite that will secure your applications and data once and for all – and the price is more than affordable. Clean-up your system and never let viruses strike back!
