PORTRAIT PROFESSIONAL

THE SHORTEST ROUTE TO DIGITAL PERFECTION

Do you remember the last time your friend was taking pictures of you at that party? Remember how many of them you asked to delete because they revealed “too much” detail – wrinkles, gloss and color of your skin? The camera or the photographer should not be blamed for that – they just do their job and are entirely impartial. However, we are not perfect, and a slightly wrong perspective or lighting may ruin a generally nice photo. What if your online vis-a-vis asked you for a photo and everything you have are a couple of photos you don't like too much? You certainly wish you had done proper makeup that day...

We all know what it takes to make a really nice photo. Professional photographers team with up cream of the crop makeup artists and lighting experts, use top-of-the-line equipment and still have to resort to digital touch-up to produce the photos that we see on the front pages of glamour magazines. We strive for perfection, but reality often has other plans. It would've been quite sad if Portrait Professional hadn't existed. But the good news that it's here to help!

Unlike the majority of other image and photo editors, Portrait Professional was created for a specific purpose – compensate for the unfortunate combination of negative factors that made you look worse than you really are and yet make you a tad more attractive. This software analyzes the elements of your face, their proportions and relative positioning and slightly adjusts them to produce a synergetic effect you'll be amazed to see! Don't be afraid that the program will change you beyond recognition – this is merely a cosmetic enhancement that adds to the aesthetics of your photo and makes you look as if it was your best day. And who would refuse to look a million dollars?!

The great thing about this photo enhancement software is that you don't have to be a digital artist to efficiently use it. Portrait Professional provides all the necessary tools for controlling the touch-up process – and these tools are something anyone can use without much hassle. You can apply various effects and gradually change their intensity to get the perfect picture. Portrait Professional measures and modifies the following areas: eyes (distance, vertical symmetry, size), lips (thickness, shape and smiling intensity), nose (size, shape, position relative to eyes and mouth), structure of face bones (particularly cheek bones and jaws), general face dimensions, shape and

sharpness of the face contour. Use markers to outline the areas of the photographed face that need correction or adjustment and let the software work its magic. Once everything has been decided upon, press the spacebar for the last time and start the final rendering – in most cases, you will have your ideal image in less than a minute!

Try Portrait Professional and discover a whole new world of opportunities offered by this smart and affordable software. Make your friends say “Wow! That’s you. But what a view!”
